## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 28, 2009 has been entered.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 – 8 and 10 - 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 5, 13 and 14 recite the limitation of “a *plurality of multiplexers which selectively output ones from among the first codes stored in the N-bit registers....and a plurality of selectors which selectively output either the selected*

**ones of the first codes or the second codes...**” in Lines 12 – 17, of claim 1, Lines 11 – 16 of claim 5, Lines 14 – 18 of claim 13 and Lines 11 – 15 of claim 14. It is unclear from the claim language above what is the selected as an output from the multiplexers (please see more below).

### ***Response to Arguments***

Applicant's arguments filed January 28, 2009 have been fully considered but they are not persuasive.

Applicants submit that the multiplexer selectively outputs "ones," as in a digital 1 or 0, and that the selector then outputs either the 1 or the second codes received from registers 1351 and 1361 (submitted on Applicants Remarks 08/28/2008). Applicants now submit that the amendment makes the claim limitations clear.

Examiner submits the binary "1" is a value that used by the mode selector to select the selected by the multiplexers (1311 – 1341, Fig.10) UMTS codes. The limitation "a plurality of multiplexers which selectively **output ones** from among the first codes..." In lines 12 – 13, is still not clear. According to the specification, each multiplexer receives a plurality of first codes (8 codes) and selects one code. So for N multiplexers there will be N selected codes. It is not clear what is meant by outputting **ones**. It cannot be binary 1 as explained above. So it is not clear if the **ones** is referred to a code. Even if it is a code that is outputted, it is not clear if it is one code from each

multiplexer or a single code from the plurality of multiplexers. Therefore, the limitation "a plurality of selectors selectively output **either the selected ones** of the first codes or the second codes" in lines 15 – 16 is also unclear for the same reasons discussed above.
